and international organization. Research pertaining to environmental science and sustainability. The biweekly newsletter aims to bring together businesses and organizations so that, together, we can more effectively address the world’s pressing issues.

The Institute for a Sustainable Earth (ISE) at George Mason University is an interdisciplinary research and education center dedicated to advancing knowledge and understanding of the complex interactions between society and the environment. ISE promotes research and education that enhances our ability to manage natural resources, protect the environment, and improve human well-being.

The meeting will be co-hosted by SDSN USA and the Institute for a Sustainable Earth at George Mason University. SDSN USA is an initiative of the United Nations Sustainable Development Solutions Network, which brings together leading scientists, policy makers, and practitioners to discuss and develop strategies for achieving the Sustainable Development Goals (SDGs). SDSN USA provides a platform for U.S. stakeholders to engage with the SDGs and to work together towards a sustainable future.

The meeting will be preceded by a two-day event on March 10-12, 2020. The first day will be dedicated to projects; learn about SDG-related resources, research, and action from institutions across the country. The second day will be focused on brainstorming on future projects; pool new ideas and explore opportunities to share resources and co-develop projects; and learn about new and emerging tools and resources.

We welcome all who wish to engage with SDSN USA and the Institute for a Sustainable Earth at George Mason University. Please contact us to learn more about how you can get involved. Contact info: info@sednusa.org.
