The ISE Newsletter provides up-to-date information on conferences, funding opportunities, and other initiatives to facilitate information sharing among researchers, practitioners, and relevant local, national, and international stakeholders on solutions to protect soil biodiversity and increase its sustainable use and management.

The Institute for a Sustainable Earth (ISE) at George Mason University is dedicated to understanding and addressing the environmental challenges that impact our planet. The Institute supports research, education, and outreach efforts that contribute to the development of sustainable practices and policies. It also serves as a platform for collaboration between researchers, policymakers, and the public, enabling the exchange of knowledge and ideas on topics such as water security, climate change, and biodiversity conservation.

The ISE engages in interdisciplinary projects that address complex environmental issues from multiple perspectives, including ecological, social, and economic dimensions. It promotes the development of integrated solutions that consider the interdependencies and feedback loops among different systems, such as water, energy, and food production.

ISE's activities are financed through various funding sources, including federal grants, private foundations, and institutional funding. The Institute aims to leverage these resources to support cutting-edge research, training programs, and capacity development initiatives. The goal is to bridge the gap between scientific discoveries and their implementation in the real world, with a focus on policy-relevant outcomes and sustainability.

ISE offers a range of fellowship and funding opportunities to support students and researchers in their work. These opportunities are designed to encourage innovation, interdisciplinary collaboration, and the translation of scientific knowledge into actionable solutions. The Institute is committed to fostering a diverse and inclusive community of scholars who contribute to the advancement of sustainability science and practice.

ISE also collaborates with other institutions and organizations to strengthen the global conversation on sustainability. It participates in initiatives such as the Sustainability Innovation Lab at George Mason University and the Global Soil Biodiversity Initiative, aiming to contribute to the development of a more sustainable, equitable, and resilient future.

ISE's programs and initiatives are designed to be accessible to a broad audience, from researchers and policymakers to educators and practitioners. The Institute encourages engagement and participation in its activities to build a shared commitment to sustainability and to contribute to a more sustainable world.
