The ISE Newsletter provides up-to-date information on conferences, funding opportunities, and pressing sustainability and resilience challenges.

The scope of the ISE Newsletter includes research and development projects, policies, and programs across multiple sectors to address the world’s most pressing sustainability and resilience challenges. The Newsletter covers the following program areas: Advanced Scientific Computing Research, Basic Energy Sciences, Geosciences, Life Sciences, Environmental Sciences, Engineering, Social Sciences, Environmental and Global Health, and Urban Systems.

The purpose of the Initiative for Sustainable Energy (ISE) is to deliver the benefits of energy research to the world’s most pressing sustainability and resilience challenges. The ISE is a collaborative research program between U.S. Department of Energy (DOE) laboratories and universities. The ISE is coordinated by MDPI under the patronage of the University of Basel, the University of California, and the University of Colorado.

The ISE is a research and action competition in the Smart Grid, Energy Efficiency, and Transportation (S&CC) domain designed to build a more cohesive research-to-application ecosystem. The ISE aims to bridge the gap between research and practice by connecting researchers with potential partners and sponsors, including industry, government agencies, and non-governmental organizations.

The ISE Newsletter includes information on conferences, funding opportunities, and research updates. Readers can sign up for the Newsletter to receive regular updates on the latest sustainable energy research and development projects.
