Save the Date: CINA Distinguished Speaker Series - Spring 2021

The Transition Advisory Board met for the first time in September and decided to form a Technology Strategy Board to advise the Center on the development of a technology strategy. The Board held its first meeting in November and discussed technology trends for higher education and anticipated challenges. DNS is an essential tool for the development and management of the Internet, and is critical for the future of higher education. The Board reviewed the current status of DNS technologies and discussed potential solutions to improve the security and scalability of the DNS. The Board also discussed the need for more research on the use of DNS technologies in higher education. The Board will hold its next meeting in December and will continue to work with the Technology Strategy Board to develop a comprehensive technology strategy for the Center.
