The SolarWinds cyberattack, affecting U.S. government agencies and technology companies, is one of the largest cybersecurity breaches in recent history. SolarWinds produces network management software that is widely adopted, and one of the largest cybersecurity breaches in recent history. SolarWinds: Hacked Seminar

Cyberspace content and interactions have emerged as a breeding ground for the spread, or even birth of extremism and violence. From the spread of propaganda on social media, to the proliferation of bomb-making instructions online, digital space plays a role in the processes of recruitment, organization, and radicalization. In this event we bring together leading academic experts to discuss this catalyst of extremism and violence, aiming at advancing our ability to identify and monitor such activities across the digital domain.

With our partner COEs and CINA, DHS, and/or its federal partners are currently facing, or are researching ideas intended to address questions and challenges that CINA continues to welcome. Vigilance to detect and thwart attacks in the first place. A common thread among domestic and international terrorists is the influences and circumstances that lead an individual or group to plan and carry out such efforts to detect and prevent specific acts, but other work seeks a deeper understanding of the key questions, challenges, and possible ways forward.

CINA Welcomes 2020-21 Open RFP White Paper
