Alumni Spotlight: Bobby Azarian

George Mason University
College of Science Alumni Chapter

At Mason Science, we encourage mentorship and networking opportunities for alumni and students alike. We believe that by providing a platform for alumni to share their experiences and knowledge, we can foster a community of support and growth. This summer, we will be hosting a series of events and programs designed to bring alumni and students together.

In September of 2021, the Mason Science community established the Elissa Williams Memorial Scholarship Fund. This fund will provide scholarship assistance to graduate and undergraduate mentees. In some cases, the meetings will be regular, frequent, and long-term.

The Romance of Reality: How the universe organizes itself to create life consciousness

John Robinson, a neuroscientist and Mason Science alumnus, has written a paper on the topic of the universe's evolution. He explores the possibility that the universe may actually be an accidental byproduct. Instead, he pulls from varying disciplines to look at the universe's evolution and the possibility of life consciousness.

Alumni News

Message from Mark Monson

Northern Virginia, well beyond the Fairfax Campus, and Mason Korea. We are an R1 research institution, and we continue to be an integral part of the Mason Science Community. There are many ways you can stay connected, whether it's in-person or virtually, we want to help you and other Science alumni stay connected.

Message from Mark Monson

As we approach the beginning of another academic year at George Mason University, as Dean Miralles-Wilhelm indicated, you are the reason Mason exists and that green and gold. You continue to be a Mason family the first time you see that green and gold. You continue to be a Mason family the first time you see that green and gold.
