AheAeD Program: APreventative and Curative Health Initiative

The AHEaD (Advancing Health Equity and Diversity) program is dedicated to addressing health disparities among underrepresented and historically excluded groups in the health sciences. Geeta Rajamani, a human biology student at Stanford University, is one of the scholars participating in the AHEaD program. Rajamani is working on her senior thesis, "Investigating Health Information Technology Usage by Underrepresented Groups in Medical Science Education." Her research focuses on understanding how technology is used in medical education and how it can be improved to better serve underrepresented populations.

Another scholar in the AHEaD program is Anshal Gupta, a medical student at the University of Chicago. Gupta is working on his project titled "Santa Clara County Public Health Jurisdictional Risk Assessment." His research involves assessing the public health risk in Santa Clara County and developing strategies to improve health outcomes for the community.

The AHEaD program is committed to providing training and support for students who are interested in advancing health equity and diversity in the health sciences. It is an opportunity for students to contribute to the field and make a positive impact on the health of underrepresented populations.
