

New FDA-Cleared Mobile App to Help Treat Patients with Opioid Use Disorders

For the first time on record, the odds of dying from an opioid overdose is greater than dying in a mobile vehicle crash, according to the [National Safety Council](#). Learn how a recently FDA-approved mobile app is being used to increase retention of patients with opioid use disorder (OUD) in outpatient treatment.

Brain Facts

Brain experts agree that although our knowledge of the brain has increased drastically in recent years, there is more to learn. Here are our top fascinating brain facts of the month:

1. Did you know that unlike plenty of other areas that replace cells in our bodies, the brain only has a limited ability to replace dead brain cells?

According to [brainfacts.org](#), the dentate gyrus is one of only a few areas of the brain that is able to create new cells to replace the old ones.

2. What does a song taste like? What color is the letter C? To 95 percent of the population, these questions probably don't make any sense. However, people with synesthesia, or synesthetes, experience a tangling of two or more senses when they encounter specific stimuli.

Share information with the BrainFutures community!

In coming weeks, we will be highlighting news and resources from the BrainFutures community.

Please submit information that you'd like us to share across our network to info@brainfutures.org

Mission

BrainFutures accelerates adoption of effective applications of brain science advances to maximize human potential.

Vision

Science-based brain health practices will be widely accessible to people of all ages, enabling improvements in learning, enhancement of cognitive performance, prevention of debilitating brain conditions and effective treatment of mental health and substance use conditions.
