From real-world context to building 3D/4D computer simulations

Professors from George Mason University, California Polytechnic State University, and the University of Tennessee to evaluate if and how songbirds might respond in the newly emptied acoustic space that results from fewer people on the road due to COVID-19.

MASON SCIENCE COMMUNITY

Side return to the idea

Lottering, Photonics and Telesurveillance software for humanitarian missions.

A small group of students and professors have been running a software for humanitarian missions. They have been developing applications for the humanitarian missions and have recently completed a project that was tested in the field.

RESEARCH & DISCOVERY

Singing in a silent spring: birds respond to a high-impact, community-wide shutdown during the COVID-19 shutdown

Researchers have been studying the effects of COVID-19 on bird singing.

IN THE NEWS

The Today Show features Mason scientist with special edition COVID-19 update.

A Mason scientist appears on The Today Show.

Tack and tip to integrate well-being tools in classroom

Faculty Affairs and Development collaborated to support the new class.
