Shining a Light on the Dark Web

The last decade has seen a sharp rise in criminal activity on the dark web, driven in part by the greater anonymity of sites not indexed by search engines like Google, and the appeal of using relatively modern technology for illegal transactions. This rise has been fueled by the growing demand for illegal goods and services, as well as the increasing sophistication of criminal operations. As a result, there is a need for more cutting-edge research into dark web marketplaces to reveal their size, scope, and the mechanisms that drive their operation. To meet this need, the Criminal Investigations and Network Analysis (CINA) Center at George Mason University has been working closely with the DHS Office of University Programs, multiple DHS components, and other stakeholders to conduct cutting edge research into the dark web. In this way, we can help to mitigate and address the challenges posed by the dark web.

Criminal Investigations and Network Analysis (CINA)

CINA’s Distinguished Speaker Series

The CINA Distinguished Speaker Series is a series of talks by leading experts in the field of homeland security. The series is designed to provide a platform for leading experts to share their insights and experiences with a wider audience. The series is open to the public, and is a great opportunity for students, researchers, and professionals to learn from the best in the field.

To learn more about the series, and to view lists of previous speakers, please visit our website.

Digital Archives: Jeffrey Hardy on Illicit trade, trademark counterfeiting and copyright piracy

The third edition of the CINA Distinguished Speaker Series features Jeffrey Hardy, who will be discussing the latest happenings in the police's fight against copyright piracy and trademark counterfeiting.

For more information, please visit the CINA website.
