Women Building Bio conference

By: Amy Adams and Tracy Mason

Women Building Bio will be held on September 22, 2020.

The annual Women Building Bio conference, has grown from a small, local conference for women in STEM to a national event. This year, the event will be virtual.

The conference will feature a panel discussion on the topic “How can the Mason Science community support women in STEM?”

IN THE NEWS

Student earns prestigious fellowship

Congratulations to Ratna Khatri, a PhD student in the Department of Mathematics, who has been awarded the Wilkinson Fellowship.

The Wilkinson Fellowship is the most prestigious postdoctoral fellowship at the Lawrence Livermore National Laboratory. Ratna earned the fellowship for her work in systems biology.

Student honored with Sandia fellowship

Ratna Khatri, a PhD student in the Department of Mathematics, has been awarded the Sandia Fellowship.

The fellowship is a prestigious postdoctoral fellowship at Sandia National Laboratories. Ratna earned the fellowship for her work in systems biology.

Research on women in STEM

The Mason Science community is committed to supporting women in STEM. The annual Women Building Bio conference is one way we do this.

In order to support women in STEM, we must first understand their experiences. This is why we are committed to research on women in STEM.

Research on women in STEM is important for several reasons.

First, women in STEM are often underrepresented in the field. This can lead to a lack of diversity in the workforce, which is not good for business.

Second, women in STEM face unique challenges. For example, they may face gender bias or discrimination.

Finally, research on women in STEM can help us identify and address these challenges.

Research on women in STEM is also important for education.

By understanding the experiences of women in STEM, we can create a more inclusive and supportive learning environment.

In conclusion, research on women in STEM is important for several reasons.
