Technological advancements have impacted the world in ways we could never have imagined. But science and technology are not just about innovation; they are also about impacting the world. This year, the College of Science will host NASA's Global Energy and Water Exchanges Project. The International Global Energy and Water Exchanges Project

NSF Rapid Funding helps researchers support students during COVID-19

the NSF has provided approximately $200,000 to a multi-disciplinary team of our scientists to find a consensus among various model predictions. The team will create an interactive web-based dashboard to present clustering analysis of the different model assumptions and uncertainty underlying these predictions. The team's efforts will aim to make the different model assumptions and uncertainty underlying these predictions.
