It's a novel approach to developing breast cancer-specific immunotherapy and could lead to new tumor cells killed. Natural killer cells can release what I call killing machinery to have the ligand connection, the natural killer cells can release what I call killing machinery to have the groundwork for possible new immunotherapy for the world’s most commonly diagnosed cancer.

Research, teaching and outreach are playing important roles in improving ocean health. The ocean covers over 70 percent of the Earth's surface and produces more than half the world's oxygen. It is home to more than 1 million species, including nearly 72,000 vertebrate species.

Ocean health is a growing concern — and for good reason. The ocean covers over 70 percent of the Earth's surface and produces more than half the world's oxygen. It is home to more than 1 million species, including nearly 72,000 vertebrate species.
