COVID-19 Antibody Testing in Local County Jails (PI: Jason Andrews) has two specific goals: 1) to determine COVID-19 seroprevalence in local jails through antibody testing; 2) to understand perceptions, attitudes, and behaviors surrounding COVID-19 among people living or working in local county jails. The project, COVID19 Antibody Testing in Local County Jails (PI: Jason Andrews), has two advisory boards for the two county jail systems involved in the study since June 2020 and will use results to inform health policy and practice.

Dear community,

I would like to extend my warmest gratitude and appreciation to all of our community and research partners in our fight against COVID-19. Our dedication to community health and look forward to hearing your poster presentations at the 19th Annual Community Health Symposium on March 31st.

Finally, I would like to thank the hardworking OCE team. Our community and research partners deserve the best and you deliver every day. Thank you for all that you do!

I would like to acknowledge the loss, injustice, and sacrifice that many have experienced so acutely over the last year, and I want to express my hope that the findings and knowledge shared during this symposium will result in a light at the end of the tunnel. As our hope grows, I would like to take a moment to reflect on our collective journey and the countless individuals who have contributed so much to public health and health equity.

With gratitude,

Lloyd B. Minor
