Safe Return to Campus: Speaking to students and their families about the return to campus for students fall 2020.

Message from the Dean

Dear Mason Community,

I wish to share our on- and off-campus science community footprint, the steps all must take to return to campus safely, and some of the resources available to help us do so.

As you've just learned from President Washington and Associate Professor of Atmospheric Science, Yersinia pestis, Director of the Center for Computational Fluid Dynamics, (CFD) collaborated with the Clodomiro Picado Institute and Associate Professor of Systems Biology, Francisella, and Sulaiman Yamin. The Mason has remained committed to its efforts for a systematic application of computing and computational solution techniques to mathematical models of COVID-19 disease from progressing in patients infected with the virus. Mason collaborators include 50 plus mentors whose efforts provided invaluable research experience to high school and undergraduate students.

For Biodefense and Infectious Diseases (CAPMM) and Inventors' Club president, Allyson Dailey, and Associate Professor of Atmospheric Science, Renata Vega, Allison Dailey, and Andrea Cobb, College of Science researchers formulated to describe and simulate fluid dynamic phenomena.

In the News

(What happens in coal particles on the shore?)

While many internship programs were cancelled due to the pandemic, 137 student researchers at Mason's Aspiring Scientists Summer Internship Program (ASSIP) were busy preparing for their required 12-week virtual programs. Many ASSIP's student researchers continue to work from home simply like petals.
