October 2020

Did you miss the last Distinguished Speaker Series? Watch speaker Price’s "Social Outlaws - What Network Science Tells Us About Gangs" Wednesday, November 11, 2020, 12:00pm-1:30pm

Social networks are the strongest predictors of gang violence. Smaller gangs benefit from outside alliances and larger gangs benefit from keeping ties within; 4) Gang boundaries are messy but best measured via networks; 2) Gang cohesion matters for survival. These things were my ‘take away’ from a very interesting and stimulating CINA white paper release talk. You may also want to read: https://digital.cina.gmu.edu/content/understanding-gang-cohesion

In 2019, CINA received 47 submissions to our annual RFP, and we have received eight paper submissions by our advisory board members, and the active participation of the academic research community along with our operation. Those thoughtful decisions rely on a deep understanding of the DHS problem space from our many interactions with DHS components, scientific and domain expertise in virtual and digital forensics, and an understanding of the Department’s needs and to see over the horizon, and to all who contribute their expertise, effort, and great ideas to craft solutions to these important problems and challenges.

In 2020, we have been focused on continuing the progress made in 2019. We will continue to focus on research that will assist the Department in achieving its goals and mission. CINA will continue to work with its partners and stakeholders to help achieve these goals. CINA is committed to supporting the Department’s mission by providing research that addresses the needs of the Department. CINA will continue to be a leader in research and innovation, and will continue to be a partner to the Department and its partners.

The CINA MSI Summer Research team from August 2020 CINA Annual Meeting.

CINA continues to welcome white paper submissions presenting research ideas intended to address questions and challenges that CINA, DHS, and/or its federal partners are currently facing, or are expected to be facing in the future. These ideas could be papers, in whatever format they are written, or they could be summaries of research that could be expanded into papers. The RFP for these white papers is a rolling RFP open to any interested parties. As we prepare to release our next RFP for white papers, we encourage you to submit your ideas for consideration.

One of the CINA center’s metrics for success is the transition of our research into operational use. This engine of innovation and future impact is no accident, but rather the product of a center whose management is committed to helping its partners understand the Department’s needs and to see over the horizon, and to all who contribute their expertise, effort, and great ideas to craft solutions to these important problems and challenges.
