Researchers and other national scholars on anti-racism and inclusive excellence.

The ARIE Conference will provide an opportunity to critically discuss anti-racism and inclusive excellence in education. Join Drs. Lance Liotta and Marissa Howard for a lecture on "Eavesdropping on the whispers of cancer to find new therapeutic targets." Staff, faculty, and students are invited to register for a lecture by Ivan D'Orso from the University of Texas Southwestern Medical Center on "Transcriptional mechanisms in HIV-1 infection and regulatory mechanisms shaping HIV-1 proviral fate." Join the Department of Chemistry and Biochemistry for a special seminar highlighting female chemists who have pursued careers in industry and law. Women in Chemistry and Biochemistry: Careers and Experiences.

The conference brings together investigators from diverse basic science and clinical fields to discuss the role of extracellular vesicles (EV) in intercellular communication. The program features relatively short talks (15 and 30 minutes) encouraging discussions that can take place after each scientific talk, discussing how EVs contribute to the disease process and advance understanding of the multifactorial impact of extracellular vesicles (EV). The conference has been partially funded by an NIH/NCATS R13 proposal, with the emphasis on inclusion and diversity effort and NIH agenda, including new questions.

In the coming week, during the State of the College Address on October 19, 2022, I will be sharing our accomplishments and ambitious, exciting next steps as a college and as the science community at George Mason University. Now it's your time…to plug in.

Time to plug in (found under "How to Submit Timesheets")

If your proposal is approved, students will be able to apply directly to your course, and you can participate in a weekly pedagogy seminar, and all LA meet regularly with course faculty to prepare for the upcoming content in the course and discuss how everything is going with the students.

The Department of Chemistry and Biochemistry invites faculty invited to apply for the Learning Assistant (LA) for your courses next semester?

Are you interested in bringing on a Learning Assistant (LA) for your courses next semester? You may apply.
