The lag in the move towards renewable energy continues to negatively impact the environment and the economy. However, recent technological advancements have made renewable energy more accessible and competitive with traditional energy sources. To accelerate this transition, policymakers must continue to support initiatives that promote the development and adoption of renewable energy technologies. This includes providing incentives for businesses and individuals to invest in renewable energy and supporting research and development projects that aim to improve the efficiency and cost-effectiveness of renewable energy systems.

Quantum Basics for the Curious: A Fireside Chat with...

Mason to host “Virginia’s Climate Future” panel to discuss ocean and land interactions, and the role policy plays in empowering economic and technological innovation.

The global pandemic has changed the paradigm, but the dangers of climate change remain constant. That’s the message our researchers hope to convey in the upcoming “Virginia’s Climate Future” panel to be held from 5 to 7 p.m. on September 24.

A fireside chat between University of Maryland’s Vice President for Research, Dr. Laurie Hollick, and Dr. John Hollis of the Center for Climate Ocean-Land-Atmosphere Dynamics (CLIVAR), and the director of Mason’s Center for Ocean-Land-Atmosphere Stewardship (COLA), will be held on Tuesday, September 22 from 2 to 3 p.m.

Recent PhD graduate’s research focuses on antibiotics targeting drug resistant pathogens, such as Malaria and Tuberculosis. Haley Ball completed her PhD in biology with a study on antibiotic-resistant bacteria in the ocean. Her research highlights the role of antibiotics in environmental systems and the potential for new treatments to combat drug-resistant pathogens.

Join the Mid-Atlantic Quantum Alliance (MQA) on Thursday, September 17, 2020 for a fireside chat between University of Maryland’s Vice President for Research, Dr. Laurie Hollick, and Dr. John Hollis of the Center for Climate Ocean-Land-Atmosphere Dynamics (CLIVAR), and the director of Mason’s Center for Ocean-Land-Atmosphere Stewardship (COLA), will be held on Tuesday, September 22 from 2 to 3 p.m.
