The 64th Annual Meeting of the Comparative and International Organization.

Sympoiesis researchers, students, practitioners and policymakers are expected to attend the 2020 CIES professional community, and engage in meaningful intellectual exchange. Over 3000 participants are anticipated to gather leading voices in the world of water, from environmentalists and policymakers to ecosystem scientists. And rising water levels threaten coastal cities around the world. The purpose of the research is to support the development of an international collaboration to address industry constraints. This program will create new science-based information and innovation to address industry constraints. The purpose of the research is to support the development of an international collaboration to address industry constraints. This program will create new science-based information and innovation to address industry constraints.

The Financial Assistance Program for Scientists and Engineers is a competitive awards program for mid-career researchers at National Laboratories, universities, and other institutions. The program supports research in the physical sciences, including materials science, nuclear physics, and astrophysics. The program also supports research in the social sciences, including economics, sociology, and political science. The program is administered by the Office of Science, Department of Energy.

The U.S. Environmental Protection Agency's (EPA) National Institute of Environmental Health Sciences (NIEHS) is offering grants to support research on the effects of environmental contaminants on human health. The program is designed to fund studies that focus on the mechanisms by which environmental exposures contribute to the development of chronic diseases, such as cancer, heart disease, and diabetes. The program is administered by the Office of Research on Environmental Health.
