A perfect 15-0 season by any measure and the national championship – Coach Dabo Swinney says it was the ideal way to close out the 2018-19 season for his ultra-talented team of coaches and players. Up next: three out of four?

College of Science joins the Clemson University family in congratulating coach Dabo Swinney and the ever-improving Clemson Tigers for capturing the 2018-19 NCAA football championship. As we basked in the Clemson spirit in Santa Clara witnessing our Clemson Tigers win the national championship, we were focused on being the best we could be every day. In the words of Coach Swinney in his interview, “We were not chasing the national championship, we were focused on being the best we could be every day.” Chasing excellence and perfection for Clemson Football this year, he offered, “We will not chase glory; we will yield perfection.”

As we relentlessly pursue excellence in science, we may not have national championships, but are also open to faculty and staff. Mondays from 5:30-6:30 p.m. in the Watt Center, room 106. Lectures are designed for students, graduate students, and people interested in science.

New lecture series promotes professional development to SCIENCE students

The College of Science’s spring seminar series is taking advantage of exciting research partnerships and collaborations and starting early in the spring to showcase to SCIENCE undergraduate and graduate students with the professional development skills they will need to get ahead in research, industry, and academia. The series is called Science Engagement and Professionalism – the seminar series will run on Mondays from 5:30-6:30 p.m. in the Watt Center, room 106.

Workshop to focus on the rising field of Data Science

Learn from Clemson researchers how the tools of data science are being used to solve problems and impact the world around us. Topics will include statistics, algorithms, analytics, optimization, and machine learning. Faculty, staff and students are strongly encouraged to attend.

Scholarship and fellowship recipients

Several of you benefit from a scholarship or fellowship established by a gift to the University. If you are one of these recipients for the 2018-19 academic year, you should have received an email requesting that you complete a Student Profile and a handwritten Thank You Note. Please check here. If you are not one of these recipients, this email is for the information of our donors and to thank each individual for their generosity.

The College of Science is piloting a new seminar series in spring 2019 intended to equip SCIENCE undergraduate and graduate students with the professional development skills they will need to get ahead in research, industry, and academia. The series is called Science Engagement and Professionalism, and the first event will be on March 26th.

The discovery that Mojave Rattlesnakes have multiple venom types that are more widespread than previously thought suggests that they better understand diversity of rattlesnake venom. Clemson researchers work with citizen-scientists to better understand diversity of rattlesnake venom. The research was published in Scientific Reports. The Mojave rattlesnakes that live in the deserts of southwestern United States and central Mexico are packed with lethal venom, though they rarely strike unless provoked. The research was supported by a grant from the National Science Foundation.
